General

Make sure that the Rada MX1 is installed by a competent installer. The product commissioning, clock (date/time) and tap set up can only be done in conjunction with the "RADA AP1" available from the Apple APP store. Time and date setting is critical to ensure data reporting is correct.

Note: Clock settings are lost after a period of 24hrs without mains power. When power is restored clock settings return to factory default (1st February 2000) and will need to be reset via the APP.

Shut off the main water and electrical supply.

Observe all local plumbing and building codes.

The Rada MX1 is a type 1, electronic, electrically operated, independently mounted valve. It is intended for surface mounting and is for connection to the mains water supply.

Isolator / Check valve / Filter housing supplied is an integral component of the tap, failing to install will invalidate the product's warranty.

The Rada MX1 must only be supplied from the power adaptor provided.

The power adaptor must be connected to the fixed wiring of the electrical supply via a switched 3A fused spur.

If the power adaptor supply cord is damaged the power adapter must be replaced by a competent person.

Where chlorine disinfection is practised, DO NOT exceed a chlorine concentration of 50 mg/l (ppm) in water, per one hour dwell time. Such procedures must be conducted strictly in accordance with the information supplied with the disinfectant and with all relevant Guidelines/Approved Codes of Practice.

Important Safety Information

The use of the word 'failsafe' to describe the function of any thermostatic mixing valve is both incorrect and misleading. In keeping with every other mechanism it cannot be considered as being functionally infallible.

Malfunction of thermostatic mixing valves can be detected by the use of proper temperature checking and maintenance routines.

Certain types of system can result in the thermostatic mixing valve having excessive 'dead-legs' of pipework. Such systems can disguise the onset of thermostatic mixing valve malfunction.

Ultimately, the user must exercise due diligence to ensure that the delivery of warm water is at a stable, safe temperature.

Make sure that the water delivery does not cause splashing or overflow.

Specification

General	PSU	Valve	
Maximum Ambient Temperature	122°F (50°C)	104°F (40°C)	
Minimum Ambient Temperature	33.8°F (1°C)	33.8°F (1°C)	
Maximum Humidity	95% rH	95% rH	
Electrical	PSU	Valve	
Supply Voltage	100 - 240 V 50/60 Hz	12 V DC	
Rated Input Current	1 A	2.0 A	
Water Ingress Protection	IP X4	IP X4	
Protection Against Electric Shock	Class II (double insulated)	Class III (SELV)	
Pollution Degree	2	2	
Rated Impulse Voltage	2.5 kV	18 V	
Performance			
Factory pre-set temperature	102.2°F (39°C)		
Factory pre-set temperature range	98.6°F - 105.8°F (37°C - 41°C)		
Programmable temperature range	91.4°F - 113°F (33°C - 45°C) (Full cold can be selected during programming)		

For Type 3 installations, the supply conditions specified in the TMV3 Requirements Manual take precedence over the operating parameters which follow.

Water Supply	
Minimum dynamic pressure	14.5 Psig - 100 kPa (1.0 bar)
Maximum dynamic pressure	72.5 Psig - 500 kPa (5.0 bar)
Maximum static pressure	145.0 Psig - 1000 kPa (10.0 bar)
Supply pressure differential	Equal pressure recommended - inlet pressures must be stable for optimum performance.
Minimum recommended differential between hot supply and outlet temp (consistent with HSE Guidelines)	44.6°F (7°C)
Hot supply temp	131°F - 149°F (140F - 149°F Recommended) 55°C - 65°C (60°C - 65°C Recommended)
Cold supply temp	33.8°F - 77°F (1°C - 25°C)
Maximum disinfection temperature	176°F (80°C)

Connection to Power Supply Unit

Installation Requirements

The Rada MX1 60 wall mounted tap is designed for panel mounting / scrub trough. Specifically where rear access is available.

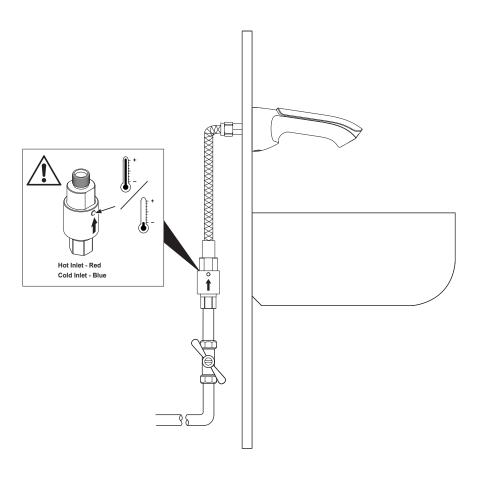

NOT suitable for solid wall installation.

The filter flow regulator unit must be fitted.

Hot - Red Dot, Cold - Blue Dot.

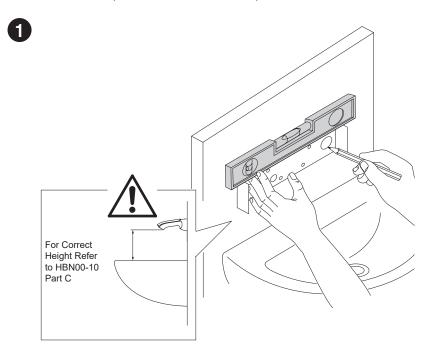

The arrow indicates flow direction.

The unit must be accessible for service.

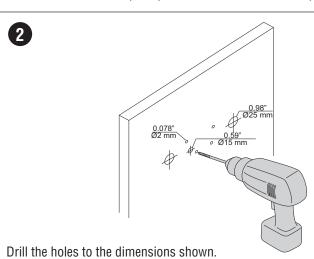

Installation

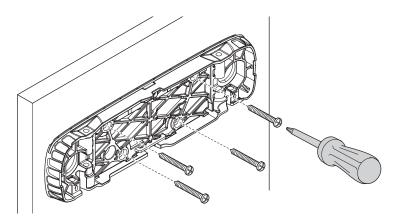

Installation of the Tap on the Stud wall and IPS panel

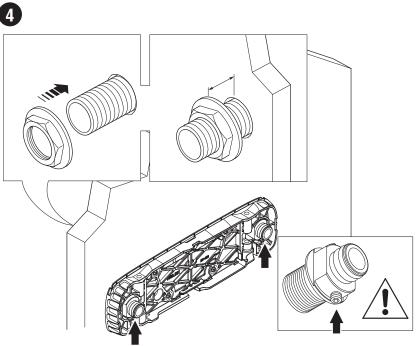

Use the installation template provided, level and mark the positions of the holes.

North America • Latin America • India • Europe / Middle East / Africa • China • Pacific Rim armstronginternational.com 11

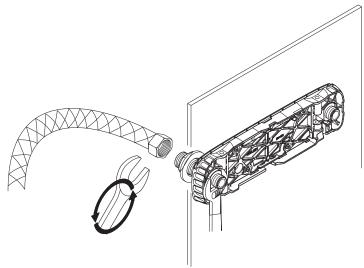

Secure the backplate using the supplied fixing screws. **DO NOT** overtighten.

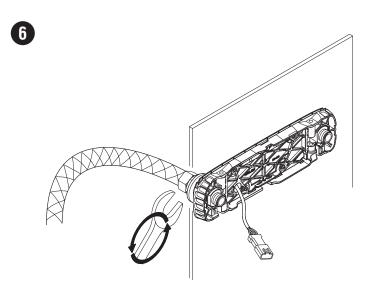

Fit the inlet connectors with isolation hex facing downwards, aligning with the holes in the backplate. Attach the backnuts (supplied) leaving approx. 10-15 mm float allowing access to the spanner flats.

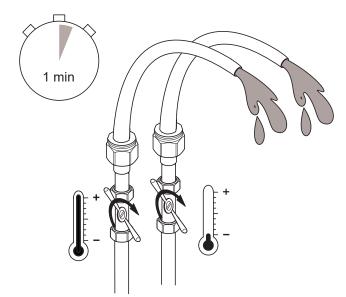

Make the plumbing connections. **DO NOT** use jointing paste when making plumbing connections.

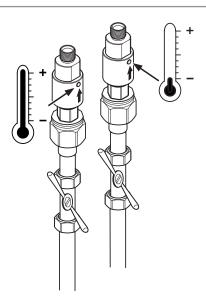

Make the plumbing connections. ${\bf DO\ NOT}$ use jointing paste when making plumbing connections.

Flush the pipework.

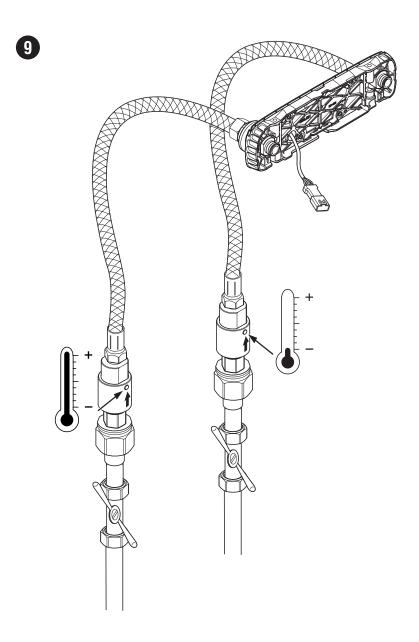

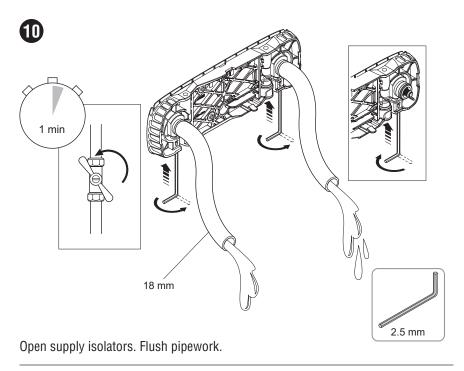

Install the filter flow regulator unit. **DO NOT** use jointing paste when making joints.

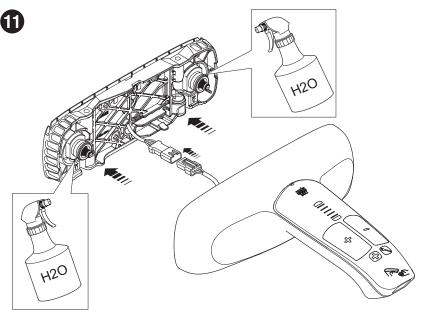

Red Dot - Hot, Blue Dot - Cold.

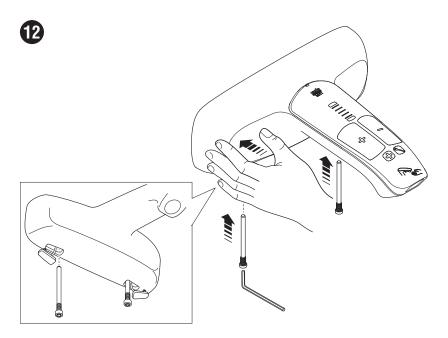

The arrow indicates flow direction.

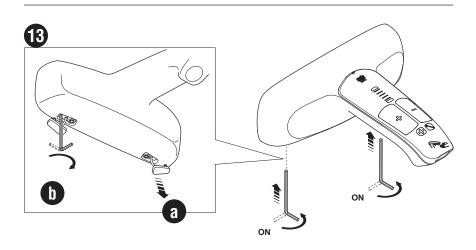

Connect flexible tails to filter flow regulator units.

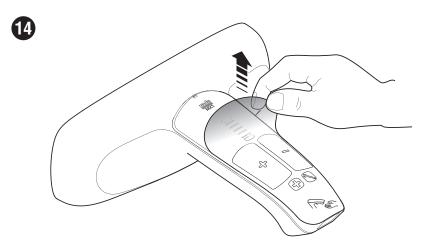

Secure the tap using the supplied screws. $\bf DO\ NOT$ overtighten. Open the isolator on the check valve / filter housing.

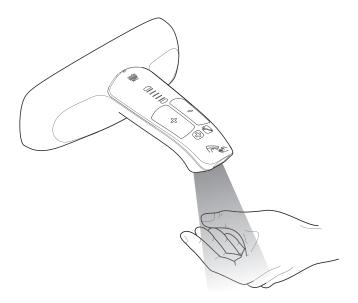

Pull off the cover from tap.

Commissioning

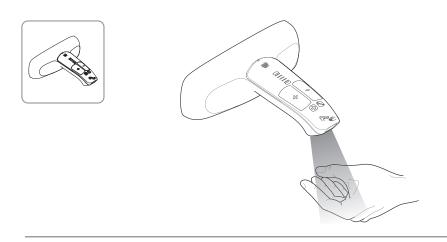

The Rada MX1 wall mounted tap will operate to factory settings when first installed. Download the "RADA AP1" from the Apple App Store and follow the on screen instructions.

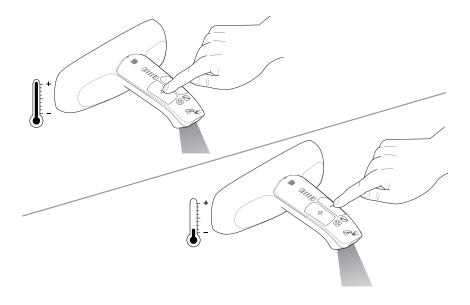

Note: Run the tap for 30 seconds in order for self calibration to take place.

Operation

The Rada MX1 wall mounted tap will operate to factory settings when first installed. Download the "RADA AP1" from the Apple App Store and follow the on screen instructions.

Fault Diagnosis

As with most electronic equipment re-setting the mixing valve by powering it down at the mains, waiting a few seconds and powering it up again can often cure any issues.

Symptoms	Probable Cause	Possible Remedy
	Product has entered an error mode indicated by a flashing "spanner" symbol	Refer to Error Log
	Product in cleaning / disabled mode	Use magnetic key to put back in normal mode.
	No power to the Digital Mixing Valve	Check electrical connection and power supply - Power cycle the digital mixer (turn off and on again).
	Inlet water supply isolators not fully turned on	Check and remedy.
	Inlet water supply failure	Check and remedy.
	Inlet filters or check valves blocked	Check and remedy.
No water flow / will not turn on	Inlet check valves / flow regulators installed the wrong way around	Check and remedy.
	Outlet spout, hose or handset blocked	Check and remedy.
	Reversed inlet supplies	Check and remedy.
	Inlet water pressure too low	Check specification.
	"Blocking" time set	Commission " Blocking " time using the communication app.
	Digital Mixing Valve air locking	Check for correct installation practices, repeat commissioning procedure and rearrange pipework to avoid airlock forming.
	Digital Mixing Valve failure	Contact Rada
	Inlet water supply isolators not fully turned on	Check and remedy.
	Inlet filters or check valves blocked	Check and remedy.
	Outlet spout, hose or handset blocked	Check and remedy.
Flow rate too low	Reversed inlet supplies	Check and remedy.
	Inlet Water pressures too low	Check specification.
	Digital Mixer Valve air locking	Check for correct installation practices, repeat commissioning procedure and rearrange pipework to avoid airlock forming.
	Digital Mixing Valve failure	Contact Rada.

Fault Diagnosis - continued

Symptoms	Probable Cause	Possible Remedy
	Inlet water pressures too high	Check specification.
Flow rate too high	Inlet check valves / flow regulators not fitted	Check and remedy.
	Digital Mixing Valve failure	Contact Rada.
	Inlet filters or check valves blocked	Check and remedy.
	Outlet spout, hose or handset blocked	Check and remedy.
	Reversed inlet supplies	Check and remedy.
Outlet flow rate fluctuates	Inlet water supply pressures are unstable or imbalanced	Ensure the water supply pressures are stable and nominally equal, refer to "Specifications".
	Digital Mixing Valve air locking	Check for correct installation practices, repeat commissioning procedure and rearrange pipework to avoid airlock forming.
	Digital Mixing Valve failure	Contact Rada.
	Product has entered an error mode indicated by a flashing "spanner" symbol	Refer to Error Log.
	Inlet water supply isolators not fully turned on	Check and remedy.
	Inlet filters or check valves blocked	Check and remedy.
	Outlet spout, hose or handset blocked	Check and remedy.
	Reversed inlet supplies	Check and remedy.
Keeps cutting out	"Run time" is set too short.	Commission the run time using the "RADA AP1".
	"Blocking" time set	Commission "Blocking" time using the "RADA AP1".
	Digital Mixer valve air locking	Check for correct installation practices, repeat commissioning procedure and rearrange pipework to avoid airlock forming.
	Digital Mixing Valve failure	Contact Rada.
	Inlet pressures and/or temperatures are unstable or spiking	Check and remedy, refer to "Specifications".

Fault Diagnosis - continued

Symptoms	Probable Cause	Possible Remedy
	Temperature adjustment set too low	Increase temperature control - Some models only
	Blend temperature set too low	Re-commission blend temperature using "RADA AP1".
	Inlet filters or check valves blocked	Check and remedy.
	Outlet spout, hose or handset blocked	Check and remedy.
	Reversed inlet supplies	Check and remedy.
Outlet temperature too cool	Hot inlet water supply temperature is too cool	Increase hot inlet water temperature to between 131°F and 149°F (55°C and 65°C), fefer to " Specifications ".
	Insufficient quantity of stored hot water	Hot water supply running out, increase storage capacity.
	Inlet water supply pressures are unstable or imbalanced	Ensure the water supply pressures are stable and nominally equal, refer to "Specifications".
	Outlet pipe run is too long	Ensure outlet pipe work is thermally lagged.
	Digital Mixing Valve failure	Contact Rada.
	Temperature adjustment set too high	Decrease temperature control - Some models only.
	Blend temperature set too high	Re-commission blend temperature using " RADA AP1 ".
	Hot inlet water supply temperature is too hot	Reduce hot inlet water temperature to between 131°F and 149°F (55°C and 65°C), refer to " Specifications ".
	Inlet filters or check valves blocked	Check and remedy.
	Outlet spout, hose or handset blocked	Check and remedy.
Outlet temperature is	Reversed inlet supplies	Check and remedy.
too hot or fluctuates	Fluctuating supply pressures and / or temperatures	Check and remedy.
	Inlet water supply pressures are unstable or imbalanced	Ensure the water supply pressures are stable and nominally equal, refer to "Specifications".
	Temperature affected by use of adjacent hot/cold outlet. Insufficiently sized pipe work to feed both Digital Mixer Valve and additional outlets at the same time.	Increase pipe sizes or separately feed to the product.
	Digital Mixing Valve failure	Contact Rada.

Fault Diagnosis - continued

Symptoms	Probable Cause	Possible Remedy
	Run on time set too long	Check settings in "RADA AP1".
No shut off/ Continuous flow	Possible debris in Digital Mixing Valve	Power cycle the digital mixer (turn off and on again). Ensure inlet filters are clean.
Continuous now	vaive	Perform a cold flush using the Coms App to flush debris from unit.
	Digital Mixing Valve failure	Contact Rada.
	The product will make a mechanical noise during (and just after) normal operation	
Noise	Digital Mixing Valve air locking	Check for correct installation practices, repeat commissioning procedure and rearrange pipework to avoid airlock forming.
NOISE	Water Hammer	Ensure all pipework is securely fixed.
	Amplified acoustic noise from the Digital Mixing Valve mechanism due to structure of the mounting	The type of wall or surface the appliance is fixed to will affect the perceived noise level; solid walls will provide a quieter operation.
	Digital Mixing Valve failure	Contact Rada.
	Protective film not removed from product	Remove protective film.
	Dirty sensor window	Clean sensor window.
False triggering	Reflective surfaces	Infra Red sensors activated by reflective surfaces such as polished basins, Hi-Vis jackets and mirrors.
	Ambient light conditions	Direct sunlight or constant shadowing of the sensors to be reduced.
	Digital Mixing Valve failure	Contact Rada.
Motor looking for-	Damaged seal	Replace seal and re-fit product.
Water leaking from product	Product not fully engaged to manifold	Correctly engage product to manifold.

A flashing "spanner" symbol indicates the product has gone in to an error mode. If repeated errors are logged this MUST be diagnosed and corrected by a technician. The "RADA AP1" can be used to

disable the valve until fault diagnosis can be made. Using the "RADA AP1", navigate to the Health Check Page tile 12, to read the error log.

Note: The last 10 errors are logged in the units memory.

As with most electronic equipment, re-setting the mixing valve by powering it down at the mains, waiting a few seconds and powering it up again can often cure any issues.

Alternatively navigate to the Health Check Page tile 9 of the "RADA AP1" and press "Clear Valve Error" button to reset the valve.

Error Log	Probable Cause	Possible Remedy
	Non Product fault - Thermistor has seen an unsafe blend temperature and has gone in to a thermal shutdown to protect the user	Valve will self clear fault.
	Inlet filters or check valves blocked	Check and remedy.
	Obstruction in inlet water supplies, e.g. kinked inlet hose	Check and remedy.
	Hot inlet water supply temperature is too hot	Reduce hot inlet water temperature to between 131°F and 149°F (55°C and 65°C), refer to "Specifications".
Over temperature at control	Inlet water supply isolators not fully turned on	Check and remedy.
Over temperature	Inlet water supply failure	Check and remedy.
warning Over temperature at	Outlet spout, hose or handset blocked	Check and remedy.
outlet	Reversed inlet supplies	Check and remedy.
	Fluctuating supply pressures and / or temperatures	Check and remedy.
	Inlet water supply pressures are unstable or imbalanced	Ensure the water supply pressures are stable and nominally equal, refer to "Specifications".
	Blend temperature affected by use of adjacent hot/cold outlet. Insufficiently sized pipe work to feed both Digital Mixer Valve and additional outlets at the same time.	Increase pipe sizes or separately feed the product.
	Digital Mixing Valve failure	Contact Rada.

Error Codes	Probable Cause	Possible Remedy
	Non Product Fault - The supply conditions are out of specification	Valve will self clear fault.
Temp imbalance Unstable supply	Hot inlet water supply temperature is too hot or fluctuating	Reduce hot inlet water temperature to between 131°F and 149°F (55°C and 65°C), refer to " Specifications ".
	Inlet water supply pressures are unstable or imbalanced	Ensure the water supply pressures are stable and nominally equal, refer to "Specifications".
Motor homing error Recovered EE error EE error - reverted to default	Non Product Fault	Re-set the product by turning electrical supply off for 30 seconds then re-apply power.
	Software failure	Re-set the product by turning electrical supply off for 30 seconds then re-apply power.
Open circuit error	Loose internal wiring connections (Thermistor)	Ensure all wiring connections are securely made.
	Thermistor failure	Contact Rada.
Unconfigured A to D Read Error RAM error	Software failure	Re-set the product by turning electrical supply off for 30 seconds then re-apply power.
EE Error External EE error RTC Fault Flash Error Scheduler Error IR not calibrated	PCB failure	Contact Rada.
Shut Off Mechanism	Software failure	Re-set the product by turning electrical supply off for 30 seconds then re-apply power.
Controller Error	Loose internal wiring connections (Solenoid and PCB)	Ensure all wiring connections are securely made.
	Digital Mixing Valve failure	Contact Rada.
Interface Error	Software failure	Re-set the product by turning electrical supply off for 30 seconds then re-apply power.
Interface CGF error IO expander error	Loose internal wiring connections (Interface and PCB)	Ensure all wiring connections are securely made
	Interface failure	Contact Rada.

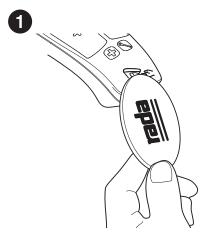

Maintenance

Cleaning

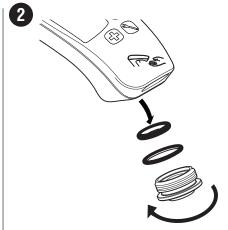

Caution! Risk of product damage. Many cleaners contain abrasive and chemical substances, and should not be used for cleaning stainless steel, enamel, plated or plastic fittings. These finishes should be cleaned using a mild washing up detergent or soap solution, rinsed and then wiped dry with a soft clean cloth.

Note: Run the tap for 30 seconds in order for self calibration to take place.

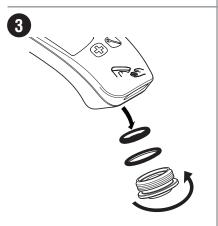

Change the flow insert.

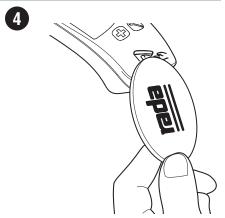

Enter cleaning mode. Scan the Rada key over the spout to enter / exit cleaning mode.

Remove the flow insert using 5/16" (8mm) hexagonal wrench.

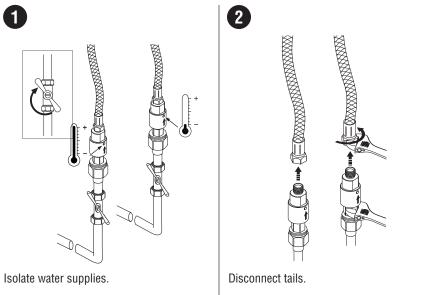

Replace the new flow insert.

Exit cleaning mode.

Clean the filter.

Limited Warranty and Remedy

Armstrong International, Inc. or the Armstrong division that sold the product ("Armstrong") warrants to the original user of those products supplied by it and used in the service and in the manner for which they are intended, that such products shall be free from defects in material and workmanship for a period of one (1) year from the date of installation, but not longer than 15 months from the date of shipment from the factory, [unless a Special Warranty Period applies, as listed below]. This warranty does not extend to any product that has been subject to misuse, neglect or alteration after shipment from the Armstrong factory. Except as may be expressly provided in a written agreement between Armstrong and the user, which is signed by both parties, Armstrong DOES NOT MAKE ANY OTHER REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR ANY IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

The sole and exclusive remedy with respect to the above limited warranty or with respect to any other claim relating to the products or to defects or any condition or use of the products supplied by Armstrong, however caused, and whether such claim is based upon warranty, contract, negligence, strict liability, or any other basis or theory, is limited to Armstrong's repair or replacement of the part or product, excluding any labor or any other cost to remove or install said part or product, or at Armstrong's option, to repayment of the purchase price.

As a condition of enforcing any rights or remedies relating to Armstrong products, notice of any warranty or other claim relating to the products must be given in writing to Armstrong: (i) within 30 days of last day of the applicable warranty period, or (ii) within 30 days of the date of the manifestation of the condition or occurrence giving rise to the claim, whichever is earlier. IN NO EVENT SHALL ARMSTRONG BE LIABLE FOR SPECIAL, DIRECT, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING, BUT NOT LIMITED TO, LOSS OF USE OR PROFITS OR INTERRUPTION OF BUSINESS. The Limited Warranty and Remedy terms herein apply notwithstanding any contrary terms in any purchase order or form submitted or issued by any user, purchaser, or third party and all such contrary terms shall be deemed rejected by Armstrong.

Special Warranty Periods are as Follows:

Pre-packaged skid shall have a 2 year warranty from date of installation but not longer than 27 months from date of shipment.

DRV shall have a 5 year all components parts warranty from date of shipment other than preventative maintenance service items which include batteries and all 'wetted' O-Rings/Seals.

The heat exchanger shall have a 1 year warranty from date of installation but not longer than 18 months from date of manufacturing.

Rada Digital Faucets shall have a 3 year all mechanical and electrical parts and a 1 year all finish parts warranty from date of shipment.
